Backend-focused Software Engineer with 5 years building cloud-hosted Java/Spring Boot microservices for the corporate banking platform of a major Canadian bank, including payments and user management. Quick to learn unfamiliar codebases, find root causes and unblock the team. Now expanding into full-stack development, pairing a strong Java backend foundation with Node.js and React.

PROFESSIONAL EXPERIENCE

TechMahindra Mexico Cloud Services Ciudad Guzmán, México (Remote)

Software Engineer – Backend Developer · Client: Scotiabank Canada *January 2022 – October 2026*

- Designed and implemented a Redis-based status-polling mechanism for payment status checks, replacing direct database queries, cutting database reads by ~20% and increasing service availability.
- Built AI-assisted Node.js/Express tools that automated per-release AppSec request emails (aggregating data from Confluence, Snyk SCA, Checkmarx and Postman) and ServiceNow readiness tickets, raising team productivity on those tasks by 33%.
- Contributed to launching wire payments for Mexico and the US on the Corporate & Commercial Online Platform, and delivered a user management system to activate, deactivate and cancel users and enterprises.
- Converted the Wire Payment File Upload submission to an asynchronous process, eliminating the 1+ minute processing that caused request timeouts on files with 200+ payments and giving users an immediate response.
- Diagnosed critical production issues across Kafka, Redis and GCP using Splunk and Dynatrace, including a timeout caused by mismatched connection TTL settings.
- Developed features and fixed bugs in Node.js/React micro-frontends.
- Upgraded microservices and shared internal Java libraries to newer Spring Boot and JDK versions, keeping them compliant with Fortify, Snyk SCA, Checkmarx, Black Duck and SonarQube.
- Supported 10+ scheduled production releases and multiple emergency releases; onboarded new developers on microservice architecture and processes.

Software Developer Intern · Internal project *September 2021 – January 2022*

- Developed REST APIs and backend business logic with Java and Spring Boot in a microservices architecture to automate the manual creation of employee CVs, backed by a MySQL database.
- Containerized and ran the microservices locally with Docker, and set up a GitLab CI pipeline to build and test each service.

EDUCATION

TECHNOLOGICAL INSTITUTE OF CIUDAD GUZMÁN Ciudad Guzmán, Jalisco

B.S. in Computer Systems Engineering *2017 – 2022*

- Honors: Highest grade average in graduating class (97.77/100).
- Competitions: National programming contest Coding Cup TecNM (2019, 2020); Google Hash Code (2019).
- Certifications: Scrum Fundamentals Certified (SFC), VMEdu; Secure Code Warrior – Green Belt (secure coding).

ADDITIONAL SKILLS

- **Languages:** Java, JavaScript, SQL, HTML/CSS, Python (basic).
- **Frameworks & technologies:** Spring Boot, Node.js, React, Redis, Kafka, Docker, Podman, JUnit, Mockito, Gradle.
- **Data, monitoring & security:** MySQL, SQL Server, Dynatrace, Splunk, Snyk, SonarQube, Checkmarx.
- **Tools:** Git, GitHub, GitLab CI, Bitbucket, Jira, Confluence, Postman, IntelliJ IDEA, GitHub Copilot, Claude Code; Scrum.
- Native in Spanish. Fluent in English.
